

GDS Google Map WinForms Control Crack+ Free

Google DataSets WinForms control represents the Google maps API and allows you to create interactive map applications with the Google maps technology. The tool allows you to insert the Google maps technology in your applications and thus enable the identification of addresses or calculating routes. You can generate useful functions in your applications, such as finding and downloading maps from Google, as well as customize geographical data based on the cartographic information. Several geographic items can be placed on the map, to mark locations or routes: markers, icons, polylines or polygons. You may thus indicate the placement of specific spots on the map, important buildings or other locations, as well as mark suitable routes. Moreover, the polygon elements are used for indicating areas while the numbered markers pinpoint departures and destinations. The tool also allows you to integrate auto-completion function for filling in addresses, in the designated fields. You can easily customize the colors, opacity, weight and styles of polygons, polylines, images, text, dash lines. Moreover, you can also integrate a tool that switches between map view and satellite images. GDS Google Map WinForms Control can be used with various programming languages and frameworks, including .NET, C# in WinForm/WCF/Silverlight/ASP.NET, Java, JavaScript, C/C++, HTML and XML. The tool is compatible with development environments such as Visual Studio, Eclipse, Visual SVN/Tortoise SVN or Cruise Control. The utility can be used with several third party components for acquiring online geographical data. Google Map API is a suitable solution, but the tool also supports ArcGIS SDK, Bing Map Controls (for WPF and Silverlight), DevExpress, ChartFX or NI Measurement Studio. The applications created with GDS Google Map WinForms Control can be deployed on multiple editions of Windows, Windows Server and even on mobile phones operating Windows or Android. The tool supports the integration of several communication protocols such as TCP/IP, UDP, HTTP, ModBus, USB, SMTP, POP3 or Keller. GDS Google Map WinForms Control Description: Google DataSets WinForms control represents the Google maps API and allows you to create interactive map applications with the Google maps technology. The tool allows you to insert the Google maps technology in your applications and thus enable the identification of addresses or calculating routes. You can generate useful functions in your applications, such as finding and downloading

GDS Google Map WinForms Control Crack + Free PC/Windows

KeyMacro is a digital signature software for creating windows based applications, and then to sign the application using digitally signing certificates. The signer adds a new generation of digital signature to the end of the generated application which allows you to send applications to third parties, being easily verifiable by the end-user. KeyMacro also allows you to access the most accurate information on your applications. VBAPBS Description: BASICS BASICS is a utility for the creation of any BASIC programs, without the need for programming knowledge. ChromCopy Description: ChromCopy is a software that will take data from one spreadsheet and paste it into another spreadsheet. CodeSample Description: CodeSample is a tool for creating small, handy and efficient code snippets. It allows you to easily create small and handy code snippets which can be used at a later time for a simple programming task. CodeSample allows you to insert a short code snippet, as a string value or as a code block, and to include additional code elements, for example, variables and constants. Moreover, you can select the scope of the code snippet, such as the entire file or a specific block. The code snippet can contain variables, constants, keywords, variables, and constants. You can specify the scope of the code snippet, for example, the entire file or a specific block. DHTML CCSD Description: DHTML CCSD is a web database utility that helps you organize data in a database, and then generate a web page to view the information.
