AutoCAD is currently owned by Autodesk, Inc., a multinational software company headquartered in San Rafael, California, United States. History Autodesk started AutoCAD in 1982 as a 2D CAD package for the AutoCAD application program interface (API) on mini and microcomputers running the CP/M operating system. This API was later adopted by several other 3D CAD software vendors, including Aldus, Corel, Mimics, SolidWorks, and most of the GIS programs. The original AutoCAD was designed to operate as a drawing package and created drawings in the exact format that AutoCAD uses to operate. Today, after many iterations, AutoCAD is a more fully featured CAD system. With the addition of parametric modeling and more recently Revit, the user interface is more powerful and flexible than that of the older AutoCAD. The original releases of AutoCAD were screen-based. Initially the user interface was not designed for large screens, and was much more cumbersome to use. In 1991, AutoCAD's development team created the drawing window framework in which AutoCAD maintains its interface. In the early 1990s, the application became web-enabled and allowed AutoCAD users to remotely share drawings and collaborate on projects with co-workers and with the general public. In 2008, the Autodesk Education Division was created, allowing Autodesk to offer training courses for AutoCAD and other Autodesk products. Evolution of CAD In May 2004, Autodesk released Revit, a 3D architecture-based software product, which is a freely downloadable upgrade to AutoCAD and is a component of the Autodesk Architectural Design Suite. This product enables architects, engineers and interior designers to generate 3D CAD models, use the tools of architectural design, and work in a true 3D environment. In 2012, Autodesk also launched a new software tool named Sketchbook Pro, which is similar to Revit in that it is also a freely downloadable upgrade to AutoCAD. These three products are meant to provide a more integrated set of tools for the design of buildings. In the autumn of 2015 Autodesk launched a new CAD product called NX, replacing both AutoCAD and AutoCAD LT. The reasons for this included Autodesk's acquisition of former competitor NavisWorks, which had its business focused on AutoCAD and AutoCAD LT for the
