Multi-threaded programming AutoCAD has implemented multi-threaded programming since version 2. The program is multi-threaded in the sense that not all entities in a drawing are shown at the same time. This allows AutoCAD to calculate and refresh data while the user is waiting for it. The user can however see the entities he/she is waiting for before AutoCAD shows them. The benefit of this is better interactivity and more responsive drawing. Postscript AutoCAD supports Postscript. Postscript was originally developed for graphics work. AutoCADs Postscript output can be exported to an image such as a printer or a png file. It can also be viewed in Adobe Reader. The ability to import files created in other CAD and drawing software, such as AutoCAD 360, AutoCAD LT, AutoCAD and the.dwg format, to AutoCAD through the new Direct Import feature. Get notified when changes are made to a file. The AutoUpdate feature in AutoCAD 2020 will update the markup in a file when a change occurs. For example, if a designer goes back and edits the width of a previously drawn line, the width will update. This ensures that a line will match the changes that have been made to the file. The designer is able to see all the changes that have been made to the file. Markup Assist: Markup Assist reduces time spent creating markup. With Markup Assist, you can add real-time feedback on your designs with no additional drawing steps. Markup Assist allows you to immediately notify a user when a point is missing, edges are broken, or if a connection is missing. For example, you can click in a window and add text with a callout or point to a location on the drawing. Add a tool to your drawing to easily edit or create the markup in a file. Designed for use with auto-number and auto-linetype. Powerful new shape tools: Extend tools – Add a polyline with a command (e.g. Align To Polyline, Bisect, Mirror) or a circle (e.g. Center Cylinder, Cut Circle, Reset, and Reset Polyline). Geometric tools – Change the properties of a path (e.g. Flatten, Join, Offset, Smooth) and path extents (e.g. Expand, Nest, Offset, Smooth, and Smooth Aligned). New tools for 2D views: Add and update a view (Add View, Update View) Adjust a view and move a view (Adjust View and Move View) Get the center of an object, check its location, or get its location (Measure, Measure Centroid, and Midpoint) View property browser – View, Edit, and Delete properties from multiple objects at once (Compare Properties, Select Properties, Compare Properties, and Delete Properties) Edit scale – Scale a view (Set Scale, Convert) 2D snap settings –
